Subject: Erasmus+ Participant Seeking Junior Game Programmer Internship

Dear, Hiring Team,

My name is **Alejandro Boix Perez**, and I am currently studying Game Design and Development at Florida Universitaria, where I am working towards an EQF Level 6 qualification.

I am writing to express my interest in game developing opportunities, specifically as a **Junior Game Programmer**.

As a participant in the **Erasmus+** program, I am seeking opportunities to gain international experience and perspective through an internship **starting from the summer of 2025**.

During my academic career, I have extensively used Unity for multiple projects:

- **Unity:** I have developed several projects using Unity, including ***Forgotten Loop***, a top-down shooter roguelike, and ***Crystal Guardians***, a game focused on the Sustainable Development Goals (SDGs) to save the world. My work with Unity has involved programming in C#, where I have prioritized writing scalable and readable code. I am also very familiar with Unity's editor tools, which has allowed me to efficiently design and implement game features.

In addition to my work with Unity, I am expanding my knowledge by exploring other game engines, including:

- **Godot:** I have been exploring Godot due to its open-source nature, which offers high customizability and insight into how the engine functions internally. To better understand the engine, I developed three minigames for the "20 Games Challenge." This hands-on experience has enhanced my proficiency with Godot and provided me with a deeper understanding of its features and capabilities.

These experiences have refined my technical skills and reinforced my abilities in teamwork, creativity, and problem-solving. I am adept at adapting to different tools and environments and am eager to bring this versatility to a professional game development team.

For more information about my projects and to get to know me better as a developer, please visit my **portfolio**.

Sincerely

Alejandro Boix Perez
